

Gckr-Flox

| | |
|---------------------|---|
| Nomenclature | C57BL/6Smoc- <i>Gckr</i> ^{em1(flox)Smoc} |
| Cat. NO. | NM-CKO-2105440 |
| Strain State | Repository Live |

Gene Summary

| | | |
|-----------------------------------|-----------------------|------------------------------------|
| Gene Symbol Gckr | Synonyms | GKRP |
| | NCBI ID | 231103 |
| | MGI ID | 1096345 |
| | Ensembl ID | ENSMUSG00000059434 |
| | Human Ortholog | GCKR |

Model Description

These mice carry loxP sites flanking exon 4-8 of *Gckr* gene. When crossed with a Cre recombinase-expressing strain, this strain is useful in eliminating tissue-specific conditional expression of *Gckr* gene.

*Literature published using this strain should indicate: *Gckr*-Flox mice (Cat. NO. NM-CKO-2105440) were purchased from Shanghai Model Organisms Center, Inc..
