Model Description

All sequences from the upstream of mouse H2-Ab1 gene exon 2 to the upstream of the H2-Ea-ps gene exon 1 were knocked out to obtain H2-Ab1、H2-Aa、H2-Eb1、H2-Eb2、H2-Ea-ps knockout mouse models. These MHC class II molecule-deficient mice were on the C57BL/6J genetic background and also lacked cell surface expression of both class II-A and class II-E MHC proteins.

Research Application: immune system

*Literature published using this strain should indicate: MHC Class II (I-A/I-E) -KO mice (Cat. NO. NM-KO-18032) were purchased from Shanghai Model Organisms Center, Inc..
