

Clec4f-Flox

| | |
|---------------------|-----------------------------------------------------|
| Nomenclature | C57BL/6Smoc- <i>Clec4f</i> ^{Em1(flox)Smoc} |
| Cat. NO. | TBD |
| Strain State | Developing |

Gene Summary

| | | |
|------------------------------|-----------------------|------------------------------------|
| Gene Symbol Clec4f | Synonyms | Kclr, D18063, Clecsf13, KUCR_MOUSE |
| | NCBI ID | 51811 |
| | MGI ID | 1859834 |
| | Ensembl ID | ENSMUSG00000014542 |
| | Human Ortholog | CLEC4F |

Model Description

These mice carry loxP sites flanking target exons of Clec4f gene. When crossed with a Cre recombinase-expressing strain, this strain is useful in eliminating tissue-specific conditional expression of Clec4f gene.

*Literature published using this strain should indicate: Clec4f-Flox mice (Cat. NO. TBD) were purchased from Shanghai Model Organisms Center, Inc..

Validation Data
