

Hepa 1-6

Strain Information

Cat. NO.	NM-GA02
Cell Line	Hepa 1-6
Strain State	Validation of tumorigenic capacity completed
Model Description	The Hepa1-6 cell line is a derivative of the BW7756 mouse hepatoma that arose in a C57/L mouse.

*Literature published using this strain should indicate: Hepa 1-6 cell line (Cat. NO. NM-GA02) was purchased from Shanghai Model Organisms Center, Inc..

Validation Data

I. Characterization of in vivo growth kinetics

The Hepa1-6 cells were subcutaneously inoculated into the C57BL/6 mice.

Figure 1. Tumor growth curve of Hepa1-6 allogeneic model (n=6)

Figure 2. Body weight change of Hepa1-6 allogeneic model (n=6)

*Wild-type cell lines are not for sale, and only applied to construction of tumor bearing mice and in-vivo efficacy studies.
