

# Avp-IRES-Cre

<b>Nomenclature</b>	C57BL/6Smoc- <i>Avp</i> <sup>em1(IRES2-Cre-WPRE-polyA)Smoc</sup>
<b>Cat. NO.</b>	NM-KI-200142
<b>Strain State</b>	Repository Live

## Gene Summary

<b>Gene Symbol</b> Avp	<b>Synonyms</b>	Vp; Vsp
	<b>NCBI ID</b>	<a href="#">11998</a>
	<b>MGI ID</b>	<a href="#">88121</a>
	<b>Ensembl ID</b>	<a href="#">ENSMUSG00000037727</a>
	<b>Human Ortholog</b>	AVP

## Model Description

A IRES2-Cre-WPRE-polyA expression cassette was knocked into the *Avp* gene stop codon site. *Avp* encodes arginine vasopressin. When crossed with a strain carrying a gene flanked by loxP sites, the flanked gene will be removed in cells expressing cre. This strain may be useful for studying hypertension.

**Research Application:** Cre recombinase tool; Neuroscience

\*Literature published using this strain should indicate: *Avp*-IRES-Cre mice (Cat. NO. NM-KI-200142) were purchased from Shanghai Model Organisms Center, Inc..

## Validation Data

Fig. 1 Cre-mediated recombination in the brain of *Avp*<sup>Cre/+</sup>; *Rosa26*<sup>tdTomato/+</sup> mouse. TdTomato(red)

expression can be detected in the suprachiasmatic nucleus (SCN) of  $Avp^{Cre/+}; Rosa26^{tdTomato/+}$  mouse.

Fig. 2 Detection of tdTomato(red) in various tissues of  $Avp^{Cre/+}; Rosa26^{tdTomato/+}$  mice. Cre mediated recombination can be detected in some cells of the brain, kidney, intestine, colon, eyes, brown fat, testis, epididymis, salivary gland, stomach, thymus, liver, pancreas, muscle, spleen and heart.
