Model Description

These mice carry loxP sites flanking exon 2 of Drd1 gene. When crossed with a Cre recombinase-expressing strain, this strain is useful in eliminating tissue-specific conditional expression of Drd1 gene.

Research Application: Research on the Signal Transduction of Monoamine GPCR and GPCR

*Literature published using this strain should indicate: Drd1-Flox mice (Cat. NO. NM-CKO-200159) were purchased from Shanghai Model Organisms Center, Inc..
